

	Comment	Screen	Status	Notes
1	From a copy perspective, the subheading doesn't feel very strong. Passive constructions generally sound weaker and the future tense could make it uncertain. I also thought at first that this is supposed to prompt the user go to go their email already. Maybe something along the lines of "We will use this email to send you a link to reset your password" would be better?	Password Reset - Modal	Implemented	I rewrote the subheading, and changed the main action button's text to better communicate what the user should do to reset their password.
2	Nice. The screens and instructions so far are clear.	Password Reset 2 - Modal		Nothing to do.
3	I would merge these into one screen. As a user I think that would reduce friction for signup	Between Sign up - 2 & Sign up - 3	Implemented	This made sense from a user experience stand-point and I agreed with the suggestion. I used ChatGPT to also see what is common practice and when multiple screens were better, and one screen was suggested as the better choice for this use case.
4	Everything so far is clear and make sense, but I wonder if this placement of the tooltip is the most logical. Does it not make more sense next to "Create password"?	Sign up - 3	Change was made, but suggestion not implemented.	The suggestion made was not a good one, but I did look into what are better practices for this. While I didn't use this suggestion or change placement of the original icon, it did lead to a change that improves the overall experience.
5	Also, "Create password" ends with a full stop but "Confirm password" doesn't. For the sake of consistency, I'd go with one and roll with it.	Sign up - 3	Implemented	Missed this.
6	Nice pop up	Skip Modal		Nothing to do. Pop up = modal
7	In general, I think the little subheading to the questions add some useful extra information, but in this case, I don't think this subheading adds much. If I indicate any topics I want to avoid, I assume I would be in control of what I see. If you can't think of any extra information to give in the subheading, maybe it's not needed?	Set-up 3	Not Implemented,	This comment is based on the assumption that everyone would connect the dots the same way. This subheading helps build the 'personality' of Evexia while also making it blatant that the user are in full control of what they see. This helps reassure the user as to the reason the question is there and their wellbeing is priority.
8	I like the emphasis on "yet". Nice touch!	Dashboard		Nothing to do.
9	Would clicking on this give me different results to "search library"? Does it maybe make more sense to have a recommended section on the home screen, rather than a secondary hyperlink?	Dashboard	Not implemented	The "recommended for you" hyperlink is to expand the user's recommended section by taking them to that part of the library. With a mobile sized screen, having a full recommended section on the dashboard would be overkill, where as showing one article of potential interest for the user with the option to go browse further in the recommended library section is preferable. While "search library" and "recommended for you" both take you to the library feature, they are different sub-sections of the library.
10	Might be useful to have an expanded editor experience, depending on how long we expect these check-ins to be. Like a zoom icon where the textbox fills the screen	Check in 3 - Modal	Implemented	This was the most drastic change to come from this round of feedback. I fleshed out the 'check in' feature a little more and made it more well-thoughtout. This comment emphasised the need for a better way to engage with the journal style check-ins.
11	This is blue here but black elsewhere, does that signify that the check-in has been completed?	Dashboard 2	Implemented	Missed this.
12	Adding icons for goals might help users visually distinguish goals faster	Pre-made	Not implemented	While it is a great suggestion, it would require further testing to determine the best icons for each goal due the fact people can associate icons with different types of goals. As these are pre-made, keeping them plain and simple, with the option for users to attach an emoji that best suits them *when they choose to use the goal* would be best. The best way to help make the goals clearer is to ensure the titles give to them are as clear about the goal as possible.
13	I think it might be valuable for users to get an immediate overview of the goals they can choose from. Right now the categories are between brackets, which requires extra effort to read and decipher. Maybe you could rearrange this screen with the various topics as subheadings and the buttons relevant to those topics under the subheadings?	Pre-made	Not Implemented	It starts to increase cognitive load for the user to go through subcategories within subcategories. Although, the removal of the goal type does simplify the button and further reduce cognitive load.
14	Bit of a pedantic comment you're not really typing a name here, so I think just "Type" is enough as a placeholder text.	Custom Goal	Implemented	Although to just have the word "Type" wouldn't be ideal, using "Name" follows the same pattern seen in earlier forms and better suits a placeholder text's purpose.
16	What does "Start value" mean in this context? Number of kilometres I've run before setting this goal? Is there a way to make this more explicit?	Set Target	Implemented	I adjusted the language used here to "Start Point" to better emphasise its the starting point of the goal.
17	Nice prediction function!	Library - Search 1		Nothing to do. Prediction function = dynamic search function
18	This space is wasted somewhat. It might be worth aligning the tabs to the top	Notifications - Settings	Implemented	I adjusted the spacing, and moved everything higher on the screen.
19	Nice! I like this.	Notifications - Settings		Nothing to do.
